WinMend Password Retriever is a password retrieval tool for Windows 7, Vista, 8 and 10. This utility is able to recover passwords for user accounts created in Windows XP/Vista/7/8/10 (except Guest account). There are two versions of this application: one runs on 32-bit platforms and another runs on 64-bit platforms. This utility is available in two versions: one for Home and one for Pro users. Home version does not require Administrator rights (even if running on Windows Vista/7/8/10), while the Pro version requires administrator rights. The price tag depends on the type of licence. It is free for home users, however it can be purchased in a paid form for business and commercial use. You can download the appropriate version from the link below:

The tool was developed by WinMend Software, a company based in Lexington, Massachusetts, United States. It is one of a set of password recovery tools available for Microsoft Windows. This utility is available in both 32-bit and 64-bit flavors, the 32-bit version requires only limited privileges to operate, the same goes for the 64-bit version that needs administrator privileges to run. This utility can retrieve passwords from Windows 7/Vista/8/10 encrypted hard drive partitions, including Microsoft's Active Directory accounts. It can also decrypt file encryption from other operating systems, including a large number of Linux distributions. The program allows you to save passwords to a specific folder or a so called HashStore or even both at once, allowing you to easily pick them up later via a simple text file. WinMend Password Retriever is a utility that recovers passwords stored in Windows' SAM, SAM database and registry databases. It can be used to recover lost passwords of Microsoft's operating systems: Windows XP/Vista/7/8 and 10. The program allows you to retrieve both local and remote passwords, including those with expired or disabled accounts. You can use it as a substitute for the built-in password recovery tools that come with the operating systems. The tool also helps you recover local user account passwords with weak or forgotten passwords. The tool recovers passwords for Active Directory accounts as well as those for other SAM users.
